Threatened & Endangered Species

Contact person: Chris Shulse

Available references indicate there are no records of federal or state listed threatened or endangered species (including plants) on state maintained roadsides within Montgomery County. Nor are there any records of caves or recharge areas on rights of way in the county. The federally endangered running buffalo clover is known from within Graham Cave State Park but a field check on MoDOT ROW along I-70 near the Loutre River in late spring 2013 did not result in any specimens of this species noted within ROW. There are multiple records of sensitive aquatic species in streams near roads within the county, and care should be taken to avoid overspray or runoff from entering streams unless a herbicide that is specifically labeled for aquatic use is being applied. In those cases, information provided on the label to avoid impacts to sensitive aquatic species must be followed. The vegetation management plan for Montgomery County mentions native grasses as a target on several routes. Currently, MoDOT does not have a herbicide on inventory that targets native grasses specifically. If control for native grasses is desired, and the contractor does not have a herbicide approved by MoDOT Roadside Maintenance specifically for native grasses, wicking (rather than broadcasting) with a non-selective glyphosate product is probably the best option to avoid damage to turf and other desirable vegetation. All applications should be conducted during appropriate conditions (and using appropriate adjuvants) to avoid drift, volatilization, runoff, and overspray.

Environmental Action: Assist as needed.
